

## **Amendments to Claims**

This listing of claims will replace all prior versions and listings of claims in the application:

### **Listing of Claims**

1. - 7. (Canceled)

8. (New) A device for long term measurement and monitoring of strong magnetic fields, comprising of a magnetic field sensor; and

an analyser unit for the evaluation of signals from said magnetic field sensor, wherein said analyser unit forms at least a derivation as a function of time from signals of said magnetic field sensor.

9. (New) The device according to claim 8, wherein said analyser unit is designed that it forms an integral as a function of time from the signals of said magnetic field sensor.

10. (New) The device according to claim 8, wherein said device comprises at least one memory associated with said analyser unit, to store at least one of the signals of said magnetic field sensor and values obtained by processing said signals.

11. (New) The device according to claim 8, wherein said device comprises at least one signaling unit associated with said analyser unit.

12. (New) The device according to claim 8, wherein said magnetic field sensor and said analyser unit are incorporated in a common housing.

13. (New) The device according to claim 8, wherein at least one optical and acoustical signaling means is provided for at least one of indicating measured values and signaling that a limit has been exceeded, and that the signaling means is controlled by said analyser unit.

14. (New) The device according to claim 8, wherein at least one additional limit discriminator is provided in said analyser unit, which compares one or several values computed from the signals of said magnetic field sensor with at least one predetermined limit and signals the entry of the value to the memory when this limit is exceeded.

15. (New) The device according to claim 8, wherein said magnetic field sensor is a multi-dimensional field sensor and said analyser unit computes at least one of a magnitude and an orientation of the magnetic field vector from the said signals.

16. (New) The device according to claim 8, wherein means are provided for at least one of communication and data exchange.

17. (New) The device according to claim 16, wherein said at least one of communication and data exchange means are an interface for at least one of linking an external computer and a memory card.

18. (New) The device according to claim 8, wherein said magnetic field sensor and said analyser unit are jointly accommodated in a housing that is suitable for being fastened in or on a piece of clothing, in a device housing or its package.
